## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-50, drawn to a optical analysis apparatus, classified in class 422, subclass 82.11.
  - II. Claims 52-55, drawn to an array of specific binding components supported on an optical surface, classified in class 436, subclass 527.
  - III. Claims 56-63, drawn to a specific binding assay, classified in class 436, subclass 172.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it fails to require capture molecules arranged in discrete reaction sites. The subcombination has separate utility such as separation or purification of samples.
3. Inventions III and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as

Art Unit: 1743

claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method does not require the film to have a greater refractive index than the substrate. Additionally, the apparatus could be used in a materially different method, such as determination of specific binding reactions involving competitive binding assays, enzymatic reactions, or other reaction schemes not requiring the application of fluorescent tracer compounds.

4. Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product could be used for sample separation or purification.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1743

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
